

# Parent FAQ About Mathematics

What is the new math curriculum?

PSD adopted “enVision 2.0”, a comprehensive K-6 math curriculum that utilizes print and digital components for most grades. Its focus is to support students’ conceptual understanding, procedural fluency, and application.

Are there new math standards?

No, we continue to use the “Colorado Academic Standards” which were adopted in Colorado in 2010 and include the national standards called “Common Core State Standards” (CCSS). Envision 2.0 aligns to CCSS. Grade 3-5 assessments (CMAS-PARCC) are also aligned to these standards.

Can I see my child’s math book?

Yes. They are available to view online or in your child’s classroom. Your child’s teacher can provide you with the login information.

How will this be different than what my child had in the past?

Your child will still receive high quality instructional best practices and will now receive a K-5 coherent and sequenced math curriculum as well. This curriculum will help children address mathematical concepts as they move from one grade level to the next. Grades will be evaluating the best way to group or rotate students.
